Dear Hiring Manager,

I am writing to apply for the IT Volunteer position with Mosaic Newcomer Family Resource Network. I am currently a student in the Data Science & Machine Learning program at Red River College Polytech, and I previously completed a Computer & Network Support certificate, which gave me hands-on experience with technical troubleshooting, device support, and working with common computer systems.

My attached resume is primarily my current DSML resume, since that is the main direction of my studies now. However, I am also looking to continue building my professional profile through meaningful volunteer experience, especially in roles where I can support people directly while strengthening my practical IT skills.

Through my education and volunteer experience, I have developed a solid foundation in troubleshooting computers and shared devices, supporting users with technical issues, and working with tools such as Windows systems, printers, and common software platforms. In my volunteer computer support work, I have helped with basic troubleshooting, printer maintenance, and maintaining shared electronics for staff and participants. I believe this experience fits well with your need for support with laptops, mobile devices, setup, and general day-to-day technology assistance.

While my resume emphasizes data and analytics, I am confident that I either already have much of the practical knowledge this role requires or can quickly learn any remaining tools or processes needed. I am comfortable following instructions, communicating clearly with staff, and adapting to new systems in a hands-on environment.

I would welcome the opportunity to contribute to Mosaic while gaining further real-world experience in IT support. Thank you for your time and consideration.

Sincerely,

Colin Bennett
